Profile Summary

DevOps Engineer with 1+ year across internships and production-style projects, shipping **CI/CD pipelines, containerized deployments, and AWS infrastructure** that cut manual deployment effort and improved release reliability. Hands-on with Docker, Kubernetes, Jenkins, Terraform, and CloudWatch-based monitoring. Looking to bring automation-first thinking to a fast-moving engineering team.

Core Technical Skills

- **Cloud (AWS):** EC2, S3, IAM, VPC, CloudWatch, Route 53 — provisioning, access control, monitoring
- **Containers & Orchestration:** Docker (image builds, multi-stage), Kubernetes (Deployments, Services, Secrets, scaling)
- **CI/CD:** Jenkins (pipeline-as-code), GitHub Actions, Git/GitHub, automated build-test-deploy workflows
- **IaC & Automation:** Terraform, Ansible, Bash/Shell scripting, infrastructure provisioning
- **Monitoring & Observability:** Prometheus, Grafana, AWS CloudWatch, log analysis, alert configuration
- **Languages & DBs:** Python, Bash, MongoDB, MySQL
- **Security:** IAM roles & policies, Security Groups, least-privilege access design

Experience

DevOps Trainee | Zevo360 Technologies Pvt. Ltd., Indore

Jun 2025 – Present

- Engineered and maintained 8 Jenkins CI/CD pipelines, cutting manual deployment time by 75% and enabling multiple daily releases instead of weekly manual pushes.
- Provisioned and managed AWS infrastructure (EC2, IAM, VPC, S3, CloudWatch) supporting 3 environments, maintaining 99%+ uptime across dev/staging.
- Built and optimized 25+ Docker images, reducing image size/build time by 35% through multi-stage builds and layer caching.
- Automated 12 routine operational tasks (backups, log rotation, health checks) via Bash scripting, saving an estimated 8-10 hours/week of manual effort.
- Configured CloudWatch dashboards and alerting for 15+ production resources, cutting mean-time-to-detect (MTTD) for infra issues by 60%.
- Deployed and scaled containerized workloads on Kubernetes, reducing deployment rollback incidents by collaborating with developers to standardize environment configs.

Projects

End-to-End CI/CD Automation Pipeline

Jenkins · Docker · Kubernetes · GitHub Actions · AWS

- Designed a fully automated CI/CD pipeline (GitHub → Jenkins → Docker → Kubernetes) that reduced deployment time from **30 minutes to under 5 minutes** per release.
- Integrated GitHub webhooks to trigger automatic builds on every push, enabling **zero manual deployment steps** for **40+ test releases**.
- Containerized **3 microservices** and deployed them to a Kubernetes cluster with rolling updates and zero downtime.

AWS Infrastructure Monitoring & Auto-Alerting System

AWS CloudWatch · EC2 · SNS · Shell Scripting · Linux

- Built a CloudWatch-based monitoring stack tracking CPU, memory, and disk metrics across **5 EC2 instances**, with SNS alerts cutting incident response time by **70%**.
- Wrote Bash-based health-check scripts that auto-restart failed services, reducing manual intervention by **80%**.
- Documented runbooks for **10 common failure scenarios**, standardizing incident response for future team members.

Novus AI — Autonomous DevOps Task Assistant

Python · Automation · System Operations · OpenAI/LLM APIs

- Built a Python-based automation assistant that executes system-level commands, cutting time spent on **15+ repetitive operational tasks** by **70%**.
- Implemented safe command-execution logic with process handling and logging, supporting **50+ automated actions** without a single unhandled failure in testing.

Terraform Infrastructure Provisioning Platform

Terraform · AWS · EC2 · VPC · IAM · S3 · DynamoDB

- Built reusable Terraform modules to provision a complete AWS infrastructure stack, including VPC, public/private subnets, Internet Gateway, Route Tables, EC2 instances, Security Groups, and IAM roles, using Infrastructure as Code principles.
- Automated end-to-end infrastructure deployment, provisioning a production-ready AWS environment in under 5 minutes using a single terraform apply command.
- Designed the infrastructure with a modular and reusable architecture, reducing configuration duplication and enabling rapid deployment across development, staging, and production environments.

Key Achievements

- Solved 100+ DSA problems across LeetCode and GeeksforGeeks, strengthening algorithmic problem-solving for infrastructure and automation logic.
- Built and deployed **3+ end-to-end DevOps/Cloud projects** spanning AWS, Docker, Kubernetes, Jenkins, and Linux — each with working, demo-able infrastructure.
- Automated CI/CD workflows using Jenkins and GitHub Actions, eliminating manual deployment steps across **5+ personal and training projects**.

Education

Institute of Engineering & Science IPS Academy, A.B Road, Indore (M.P), India	2022-2026
• B.Tech Computer Science & Information Technology (CSIT) CGPA – 8.52	

Training And Certifications

• Cloud Computing Internship and Training – Codec Technology	(July 2025 – Sept 2025)
• Linux Administration Fundamentals – Great Learning	(Oct 2025 – Nov 2025)
• DevOps Internship & Training – Krutanic (Wipro Accredited)	(Dec 2024 – Feb 2025)
• Python Programming Certification – Udemy	(Mar 2024 – May 2024)
